

Who we are?

GREAT DESIGNS is a company with vision and deep perspectives. Throughout years of experience we have worked out practical and firm solutions how to grow your profit by cutting down production and man power costs. We have knowledge, capacity and tools necessary to start-up, expand or recover Your business – your success is our success.

Outsourcing possibilities

In Poland, over many years of cooperation we have established wide network of entrusted subcontractors in various fields of production market. Should you want us to find competitive offer for manufacturing your product – we will do that for sure. But finding better price is just a first step and we'd love to go further with you. How? We will take over whole responsibility that is connected to each certain order: preparing necessary agreements on cooperation and confidentiality agreements, constant production supervision since placing the order, quality control, final inspections, keeping delivery times, etc. Simply saying, you can let us take care of everything, or you can participate in each step of the process if you wish so. Depending on your time and convenience, you can decide.

Engineering capacity

Great Designs engineering team consists of high-qualified mechanical and structural engineers. Our common skills connected with practical experience and powerful software tools make us able to face any challenge from You. Since working out the idea, through complete 3D design, FEM strength calculations and preparing technical documetation, you will receive final product ready to implement into production.

What can we offer to You?

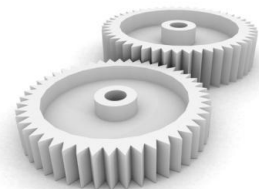

1. Full Outsourcing

- ▶ within a short time providing competitive offers for your product,
- ▶ preparation of all legal documents to make your business safe,
- ▶ supervision of complete production process since placing the order to final delivery,
- ▶ quality controls and final inspections.

2. Full Engineering

- ▶ complete 3D design using well-advanced CAD/CAE software,
- ▶ creation of 2D technical documentation ready for production,
- ▶ FEM calculations including pre-processing, solving and post-processing,
- ▶ working out construction ideas and innovative products,
- ▶ optimization and updating existing products.

3. Outsourcing + Engineering

Combined service of both services described above.

Looking forward to work together!
